Equality & Hashing Rationale

Testing Summary

Defensive Coding

Here is an example us null checking in our solution

```
public Contact format(Contact input) {
        String email = input.getEmail();
        if (email == null || email.isBlank()) {
            return input;
        }

        String trimmed = email.trim();
        String html = "<a href=\"mailto:" + trimmed + "\">" + trimmed + "</a>";
        return input.withEmail(html);
    }
```

Reflections

Commit Contributions

You just write your text and if I want *italics* and if I want **bold**.
